

# Pension Fund Accounts Reporting Requirement

## Introduction

CIPFA's Code of Practice on Local Authority Accounting 2022/23 requires Administering Authorities of LGPS funds that prepare pension fund accounts to disclose what IAS26 refers to as the actuarial present value of promised retirement benefits. I have been instructed by the Administering Authority to provide the necessary information for the London Borough of Camden Pension Fund ("the Fund").

The actuarial present value of promised retirement benefits is to be calculated similarly to the Defined Benefit Obligation under IAS19. There are three options for its disclosure in the pension fund accounts:

- showing the figure in the Net Assets Statement, in which case it requires the statement to disclose the resulting surplus or deficit;
- as a note to the accounts; or
- by reference to this information in an accompanying actuarial report.

If an actuarial valuation has not been prepared at the date of the financial statements, IAS26 requires the most recent valuation to be used as a base and the date of the valuation disclosed. The valuation should be carried out using assumptions in line with IAS19 and not the Fund's funding assumptions.

## Present value of promised retirement benefits

Year ended	31 March 2023	31 March 2022
Active members (£m)	589	866
Deferred members (£m)	422	658
Pensioners (£m)	841	1,004
<b>Total (£m)</b>	<b>1,852</b>	<b>2,528</b>

The promised retirement benefits at 31 March 2023 have been projected using a roll forward approximation from the latest formal funding valuation as at 31 March 2022. The approximation involved in the roll forward model means that the split of benefits between the three classes of member may not be reliable. However, I am satisfied that the total figure is a reasonable estimate of the actuarial present value of benefit promises.

The figures include both vested and non-vested benefits, although the latter is assumed to have a negligible value. Further, I have not made any allowance for unfunded benefits.

It should be noted the above figures are appropriate for the Administering Authority only for preparation of the pension fund accounts. They should not be used for any other purpose (i.e. comparing against liability measures on a funding basis or a cessation basis).

## Assumptions

The assumptions used are those adopted for the Administering Authority's IAS19 report and are different as at 31 March 2023 and 31 March 2022. I estimate that the impact of the change in financial assumptions to 31 March 2023 is to decrease the actuarial present value by £883m. I estimate that the impact of the change in demographic assumptions is to decrease the actuarial present value by £16m.

**Financial assumptions**

Year ended	31 March 2023	31 March 2022
	% p.a.	% p.a.
Pension Increase Rate (CPI)	3.00%	3.20%
Salary Increase Rate	3.50%	3.70%
Discount Rate	4.75%	2.70%

**Demographic assumptions**

The longevity assumptions have changed since the previous IAS26 disclosure for the Fund.

Life expectancy is based on the Fund's VitaCurves with improvements in line with the CMI 2021 model, with a 10% weighting of 2021 (and 2020) data, standard smoothing (Sk7), initial adjustment of 0.25% and a long term rate of improvement of 1.5% p.a.. Based on these assumptions, the average future life expectancies at age 65 are summarised below:

	Males	Females
Current pensioners	21.5 years	24.3 years
Future pensioners (assumed to be aged 45 at the latest valuation date)	22.8 years	25.9 years

All other demographic assumptions are unchanged from last year and as per the latest funding valuation of the Fund.

**Sensitivity Analysis**

CIPFA guidance requires the disclosure of the sensitivity of the results to the methods and assumptions used. The sensitivities regarding the principal assumptions used to measure the obligations are set out below:

Change in assumption at 31 March 2023	Approximate % increase to promised retirement benefits	Approximate monetary amount (£m)
0.1% p.a. decrease in the Discount Rate	2%	31
1 year increase in member life expectancy	4%	74
0.1% p.a. increase in the Salary Increase Rate	0%	2
0.1% p.a. increase in the Pension Increase Rate (CPI)	2%	29

**Professional notes**

This paper accompanies the 'Accounting Covering Report – 31 March 2023' which identifies the appropriate reliances and limitations for the use of the figures in this paper, together with further details regarding the professional requirements and assumptions.
